CMPortfolio | Mobile Application Test Log

SWE3409 · Individual Assignment 2 | Test date: 12 October 2026

Student	Registration	Application	Verification code	Test device	Operating system
Cedrick Manzi	25/27196	CMPortfolio	MOB-A2-7196	Google Pixel 3a	Android 12

Institution: INES Ruhengeri • Technology: React Native, Expo, TypeScript

Repository: https://github.com/cedrickmanzi3/MOB_A2_2527196

1. Objective and evidence basis

The purpose of this test log is to record the student-reported functional and offline checks of CMPortfolio on Android. PASS denotes a test explicitly reported as successful by the student, not independently witnessed or automatically verified. No screenshots or external test traces were supplied with this log. The test date above is the reporting date; earlier tests were not individually time-stamped.

2. Test environment and scope

Installed Android APK: used for the Airplane Mode check. Expo Go: previously used for the reported close/reopen persistence check. Hardware: Google Pixel 3a, Android 12. Network: Airplane Mode enabled during the reported APK offline check. APK build identifier, exact version, installation evidence, and camera/gallery permission screenshots: pending.

3. Functional test cases

ID	Feature	Test steps	Expected result	Actual result / evidence basis	Status
TC-01	Five tabs	Open Home, Skills, Projects, Profile and About using bottom tabs.	Each destination opens.	Student reports all five tabs worked.	**PASS**
TC-02	Project details: CMPortfolio	Projects > CMPortfolio > details > return.	Correct detail screen opens; return to Projects.	Student reports both detail screens and return navigation worked.	**PASS**
TC-03	Project details: Kinigi Milk Check	Projects > Kinigi Milk Check > details > return.	Correct detail screen opens; return to Projects.	Student reports both detail screens and return navigation worked.	**PASS**
TC-04	Headline validation	Enter an invalid/short headline; attempt Save.	Invalid value is rejected with a message.	Student reports headline validation worked.	**PASS**
TC-05	Biography validation	Enter an invalid/short biography; attempt Save.	Invalid value is rejected with a message.	Student reports biography validation worked.	**PASS**
TC-06	Primary skill validation	Clear primary skill; attempt Save.	Required-field feedback appears.	Student reports primary skill validation worked.	**PASS**
TC-07	Availability validation	Clear availability; attempt Save.	Required-field feedback appears.	Student reports availability validation worked.	**PASS**
TC-08	Profile save / persistence in Expo Go	Edit fields and picture; close and reopen Expo Go.	Saved values and picture remain.	Student reports profile information and picture remained after reopen in Expo Go.	**PASS**
TC-09	Camera capture	Use Choose Profile Photo > Take Photo.	Camera opens and selected image can be used.	Student reports camera capture worked.	**PASS**
TC-10	Gallery selection	Use Choose Profile Photo > Choose from Gallery.	Photo can be selected.	Student reports gallery selection worked.	**PASS**

TC-11	Photo replacement	Choose a different photo after one is set.	Displayed profile image changes.	Student reports photo replacement worked.	**PASS**
TC-12	Photo removal	Select Remove Photo.	Photo is removed / placeholder appears.	Student reports photo removal worked.	**PASS**
TC-13	Custom application icon	Locate CMPortfolio on Android launcher.	Custom icon is displayed.	Student reports custom icon worked.	**PASS**
TC-14	Installed APK offline navigation	Enable Airplane Mode; open the installed APK and main screens.	Main screens open without Internet.	Student reports installed APK main screens opened and worked offline.	**PASS**
TC-15	Installed APK restart persistence	Edit/save profile in installed APK; force close; reopen while offline.	Profile values and photo remain in installed APK.	Not specifically reported for installed APK; Expo Go persistence alone is separate evidence.	**PENDING**
TC-16	Installed APK offline photo handling	In Airplane Mode, take/select/change/remove image in installed APK.	All image actions work without network.	Not explicitly tested in the reported APK Airplane Mode session.	**PENDING**
TC-17	Installed APK validation offline	In Airplane Mode, exercise each invalid profile input.	Correct validation appears without network.	Not explicitly tested in the reported APK Airplane Mode session.	**PENDING**
TC-18	APK install independently	Install APK on device without Expo Go; capture installation/build evidence.	Standalone APK installs and launches.	Installed APK use reported; install process screenshot/build record not provided.	**PENDING**

4. Issues and corrective actions

Item	Issue or observation	Corrective action / next check	State
I-01	No functional defect was specifically reported in the submitted test summary.	Do not interpret absence of reports as a defect-free certification; record any reproducible issue when found.	OPEN REGISTER
I-02	Screenshots, APK build URL/identifier and device evidence are not attached.	Capture real device evidence and record APK build URL/version before submission.	**PENDING**
I-03	Expo Go persistence reported; APK persistence after restart not separately evidenced.	Repeat profile-save restart test in installed APK, preferably in Airplane Mode.	**PENDING**

5. Screenshot / evidence register

Evidence ID	Required capture	Coverage	Evidence status
EV-01	Home screen showing student name and verification code	Home identity and installed app interface	TO ATTACH
EV-02	Skills screen and bottom navigation	Five-tab navigation / Skills	TO ATTACH
EV-03	Projects list	Two projects	TO ATTACH
EV-04	CMPortfolio detail screen	Project-details navigation	TO ATTACH
EV-05	Kinigi Milk Check detail screen	Second project details	TO ATTACH
EV-06	Profile form (valid saved data)	Editing and save	TO ATTACH
EV-07	Validation message(s)	Headline, biography, primary skill, availability	TO ATTACH
EV-08	Photo actions / changed avatar	Camera/gallery, replace and remove (separate captures if needed)	TO ATTACH
EV-09	Airplane Mode indicator with installed APK screen	Offline APK test; evidence of network state	TO ATTACH
EV-10	Android launcher icon and APK build/release record	Custom icon and standalone build provenance	TO ATTACH
EV-11	Installed APK after restart showing stored data	APK persistence retest	PENDING TEST

6. Conclusion

Based solely on the student’s explicit account, navigation, two project detail screens, four validation checks, Expo Go persistence, image operations, custom icon, and basic Airplane Mode operation of the installed APK were successful. This log intentionally does not claim that unreported APK persistence, offline photo handling, or offline validation have passed. Screenshot proof and build information should be appended for the final submission.

Prepared from student-reported testing; not an independent laboratory certification.
